

Information contained in state space models

Consider the following Bayesian network,

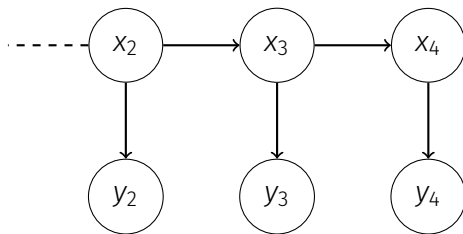

If we know x_2 , we can learn about x_4 because of

green: the motion model.

yellow: the measurement model.

pink: both, the motion and measurement models.

orange: neither of them.

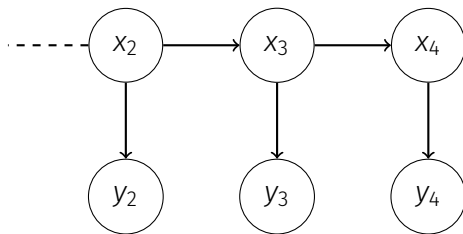

We can use data y_3 to learn about x_3 because of

green: the motion model.

yellow: the measurement model.

pink: both, the motion and measurement models.

orange: neither of them.

We can use data y_2 to learn about x_4 because of

green: the motion model.

yellow: the measurement model.

pink: both, the motion and measurement models.

orange: neither of them.
