

Resampling

CHALMERS
UNIVERSITY OF TECHNOLOGY

Which of the following statements are true regarding resampling? By Resampling,

Green: we make an approximation of our particle approximation of $p(\mathbf{x}_k|\mathbf{y}_{1:k})$.

Orange: we get a more accurate approximation of $p(\mathbf{x}_k|\mathbf{y}_{1:k})$ than what we had before we resampled.

Pink: we move the particles in a similar manner as we do in the measurement update of a Gaussian filter.

Yellow: we focus our particles to high probability areas so they are not wasted in improbable states.
